Deletion Beginning Doubly-Linkedlist

```
Node head = new Node(1);
head.next = new Node(2);
head.next.prev = head;
head.next.next = new Node(3);
head.next.next.prev = head.next;
// The list is created: 1 <-> 2 <-> 3

// Call delHead() method

// Check if the list is empty
if (head == null) {
    return null; // If empty, return null (but head is not null, so continue)
}

// Store the current head (1) in temp
Node temp = head;

// Move head to the next node (2)
head = head.next;

// If new head (2) is not null, update its prev pointer
if (head != null) {
```

Duran, Christian Dave S.
Morales, Cyrel Jave M.

```
    head.prev = null; // Disconnect old head (1)
}

// Return the new head, which is now pointing to 2
return head;
```

```
// Calling printList()
// Initialize curr to head (2)
```

```
// 1st iteration
curr.data → 2
Print 2
Move curr to curr.next (3)
```

```
// 2nd iteration
curr.data → 3
Print 3
Move curr to curr.next (null)
```

```
// 3rd iteration
curr is null, exit loop
```

Final Output:

2 <-> 3
